

GOBIK[®]

**Custom
Works**

Custom Works

01 Inspiration

We help you choose the models that best suit your needs while gathering your ideas and design inspiration.

02 Design

We develop a graphic concept tailored to your vision and create the initial garment design.

03 Customization

Once the graphic concept has been approved, we begin adapting the design across the rest of the garments in your collection.

04 Production

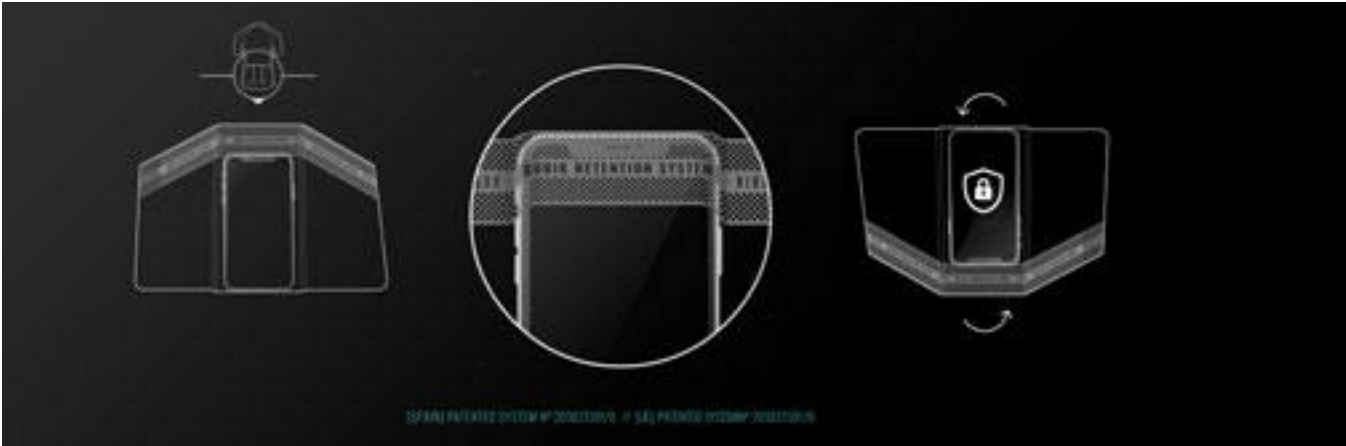

Finally, production begins, with every stage carefully monitored and inspected at key points throughout the manufacturing process.

The GRS is a retention system featuring a lightweight elastic band sewn along the top edge of the rear pocket. This patented design helps prevent items from accidentally falling out, whether on steep descents or when removing the garment.

Carry everything you need with complete confidence, knowing your essentials will stay securely inside the pockets, even over rough terrain or during off-road rides.

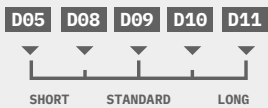

Our GRS retention system, combined with carefully engineered pocket construction and a selection of elastic, compressive fabrics, provides generous storage capacity without compromising aerodynamics or the security of your essentials.

CUSTOM VINYL

Vinyl application is a customization technique that allows a logo, text, or 2D graphic to be applied directly to the garment. It is achieved using heat-transfer vinyl, which is bonded to the fabric with heat and pressure to create a clean, crisp, and durable finish. This method is ideal for simple or single-color designs, delivering sharp definition and excellent resistance to wear and repeated washing.

VINYL COLOR

WHITE BIB STRAP OPTION

Our CUSTOM bib shorts are available in a **standard** leg length, with the option to choose from **different lengths** to suit your preferences and body shape. This customization option is available directly on the product page.

CUSTOMIZABLE AREAS

The white areas shown on the garment can be fully customized using sublimation, allowing for the application of custom colors, graphics, and designs.

On **STANDARD** versions, the leg grippers, side panels, and rear panels can all be customized through sublimation.

On **SOLID** versions (garments made from solid-color fabrics), only the leg grippers can be customized through sublimation. The side and rear panels are suitable for vinyl transfer customization only.

NON-CUSTOMIZABLE AREAS

The black areas shown on the garment cannot be customized. However, depending on the garment, the fabric color can be selected.

CUSTOM27 IMPROVEMENTS

JERSEY UPDATES

REACTIVE

Developed exclusively for cyclists who push their performance to the limit, this jersey incorporates key innovations focused on aerodynamics, comfort, and race-ready functionality.

Its redesigned front panel, made from a new linear-structured fabric, enhances both the garment's appearance and technical performance, delivering the ideal balance of fit, breathability, and lightweight comfort.

The new aero sleeves feature a fabric with raised longitudinal ribs on the outer surface that act as airflow disruptors, transforming laminar airflow into controlled turbulence to improve aerodynamic efficiency.

The ultra-close fit and ergonomic pattern have been refined to minimize the number of seams. Thanks to bonded construction, the jersey is lighter and provides exceptional, friction-free comfort, even during prolonged, high-intensity efforts.

The segmented waistband is engineered to maximize fit. The fully bonded front section eliminates visible seams for a clean finish, while the rear features a new lightweight, elastic silicone gripper with enhanced grip, ensuring the jersey stays securely in place throughout every ride.

JERSEY UPDATES

VANQUISH

The jersey features a new aero fabric on the sleeves, with a ribbed structure and zigzag knit pattern that delivers a modern, sophisticated look while significantly enhancing aerodynamic performance and comfort.

Traditional cuffs have been replaced with clean-cut sleeve openings, creating a lighter, cleaner, and more ergonomic finish that reduces pressure points and improves overall fit.

The same technical fabric has also been applied to the rear pockets, creating a more cohesive look while reducing overall weight.

Its engineered structure is designed to optimize airflow, channeling it toward the lower back to improve aerodynamic efficiency while riding.

Its versatility makes it an ideal choice for both intensive training sessions and long rides in changing weather conditions.

JERSEY UPDATES

ATTITUDE (MAGNITUDE)

The pattern has been redesigned around the sleeves and shoulders to achieve a more contemporary, streamlined, and refined fit that enhances body contouring while improving freedom of movement.

The new front panel, made from a linear-structured fabric with a refreshed appearance, delivers a more sophisticated look while offering superior breathability and a more precise fit.

The sleeves and rear pockets now share the same technical fabric, creating a more cohesive aesthetic while reducing weight and enhancing functionality in the storage areas.

The rear hem features a new lightweight, more elastic gripper that provides improved stability without compromising comfort.

With its unmistakably modern design, this jersey not only stands out on the most demanding rides but also delivers the comfort and performance needed to push beyond your limits.

BIB UPDATES

LIMITED

The Limited bib shorts have been completely redesigned with an updated bib strap system featuring a new geometry and optimized materials to enhance fit, stability, and overall comfort.

The waist area now incorporates a new technical fabric that improves body adaptation, while a new 45 mm-wide polypropylene strap provides more uniform support and greater stability.

Thanks to its lightweight construction and wider contact surface, pressure is distributed evenly across the rider, delivering enhanced comfort even on long-distance rides.

AEROSUIT UPDATES

MADISON

The new front panel, made from a linear-structured fabric with a refreshed appearance, enhances the garment's aesthetics while optimizing fit and breathability.

The new aero sleeves, crafted from a fabric with raised ribbed lines, improve aerodynamic efficiency by reducing drag while providing greater comfort and ventilation during intense efforts.

Designed to perform at the highest level, every detail of this jersey is engineered to enhance comfort, efficiency, and style on the bike.

CUSTOM27 NEWS

NEW JERSEY

CX SCA

The jersey that makes you feel fast from the very first ride. Some jerseys simply accompany you on the ride. Others change the way you feel on the bike.

This new version of our flagship jersey was created for exactly that. For the days when you set off at full speed from the very beginning, when you want to stay comfortable while knowing every detail is working in your favor.

Its new aerodynamic sleeve construction is about more than just looking fast. It's designed to deliver a closer fit, reduce movement, and move naturally with your body as your speed increases. The result is a clean, second-skin fit, an exceptionally lightweight feel, and the kind of comfort that lets you forget what you're wearing.

This evolution of the CX doesn't rely on flashy features to stand out. It simply performs. And when a jersey performs this well, it becomes the one you reach for ride after ride, without a second thought.

NEW JERSEY

ESCAPER

The jersey you'll never know when to stop wearing... because the season never really ends.

Some jerseys spend months waiting in the wardrobe for the right time of year. Others simply stay with you all year round. This long sleeve jersey belongs to the latter.

It isn't designed for a single season, but for those in-between days when the weather shifts, the rides get longer, and you need a garment you can always rely on.

Its new fabric delivers outstanding thermoregulation, striking the perfect balance between warmth and breathability. It keeps you warm when temperatures drop, breathes efficiently as the pace picks up, and maintains a consistently comfortable feel throughout the ride. It's the kind of jersey that adapts naturally to changing conditions, so you can focus on the road instead of what you're wearing.

This latest evolution takes comfort even further. Fewer seams create a cleaner feel against the skin, while the refined fit offers greater freedom of movement without sacrificing precision. New raw-cut cuffs complete the design, eliminating unnecessary pressure and distractions.

The result is a jersey that takes the guesswork out of getting dressed. You grab it, head out, and it simply works—through autumn, spring, or those milder winter days.

A jersey designed for consistent comfort, so you can enjoy every ride without giving your kit a second thought.

NEW VEST

PRIME

The vest you reach for without thinking.

We've all been there before a ride. Standing in front of the wardrobe, looking at the sky, wondering whether it will stay cool or warm up later.

The PRIME was created for exactly that moment. It isn't trying to be the most technical or the most eye-catching vest. It's designed to be the one you instinctively reach for because you know it won't let you down.

It's simple because it doesn't need to explain itself. And it's practical because it performs on more days than you'd expect.

It's the vest you slip into your rear pocket “just in case”—and end up wearing far more often than you ever imagined.

NEW AEROSUIT

FRONTIER

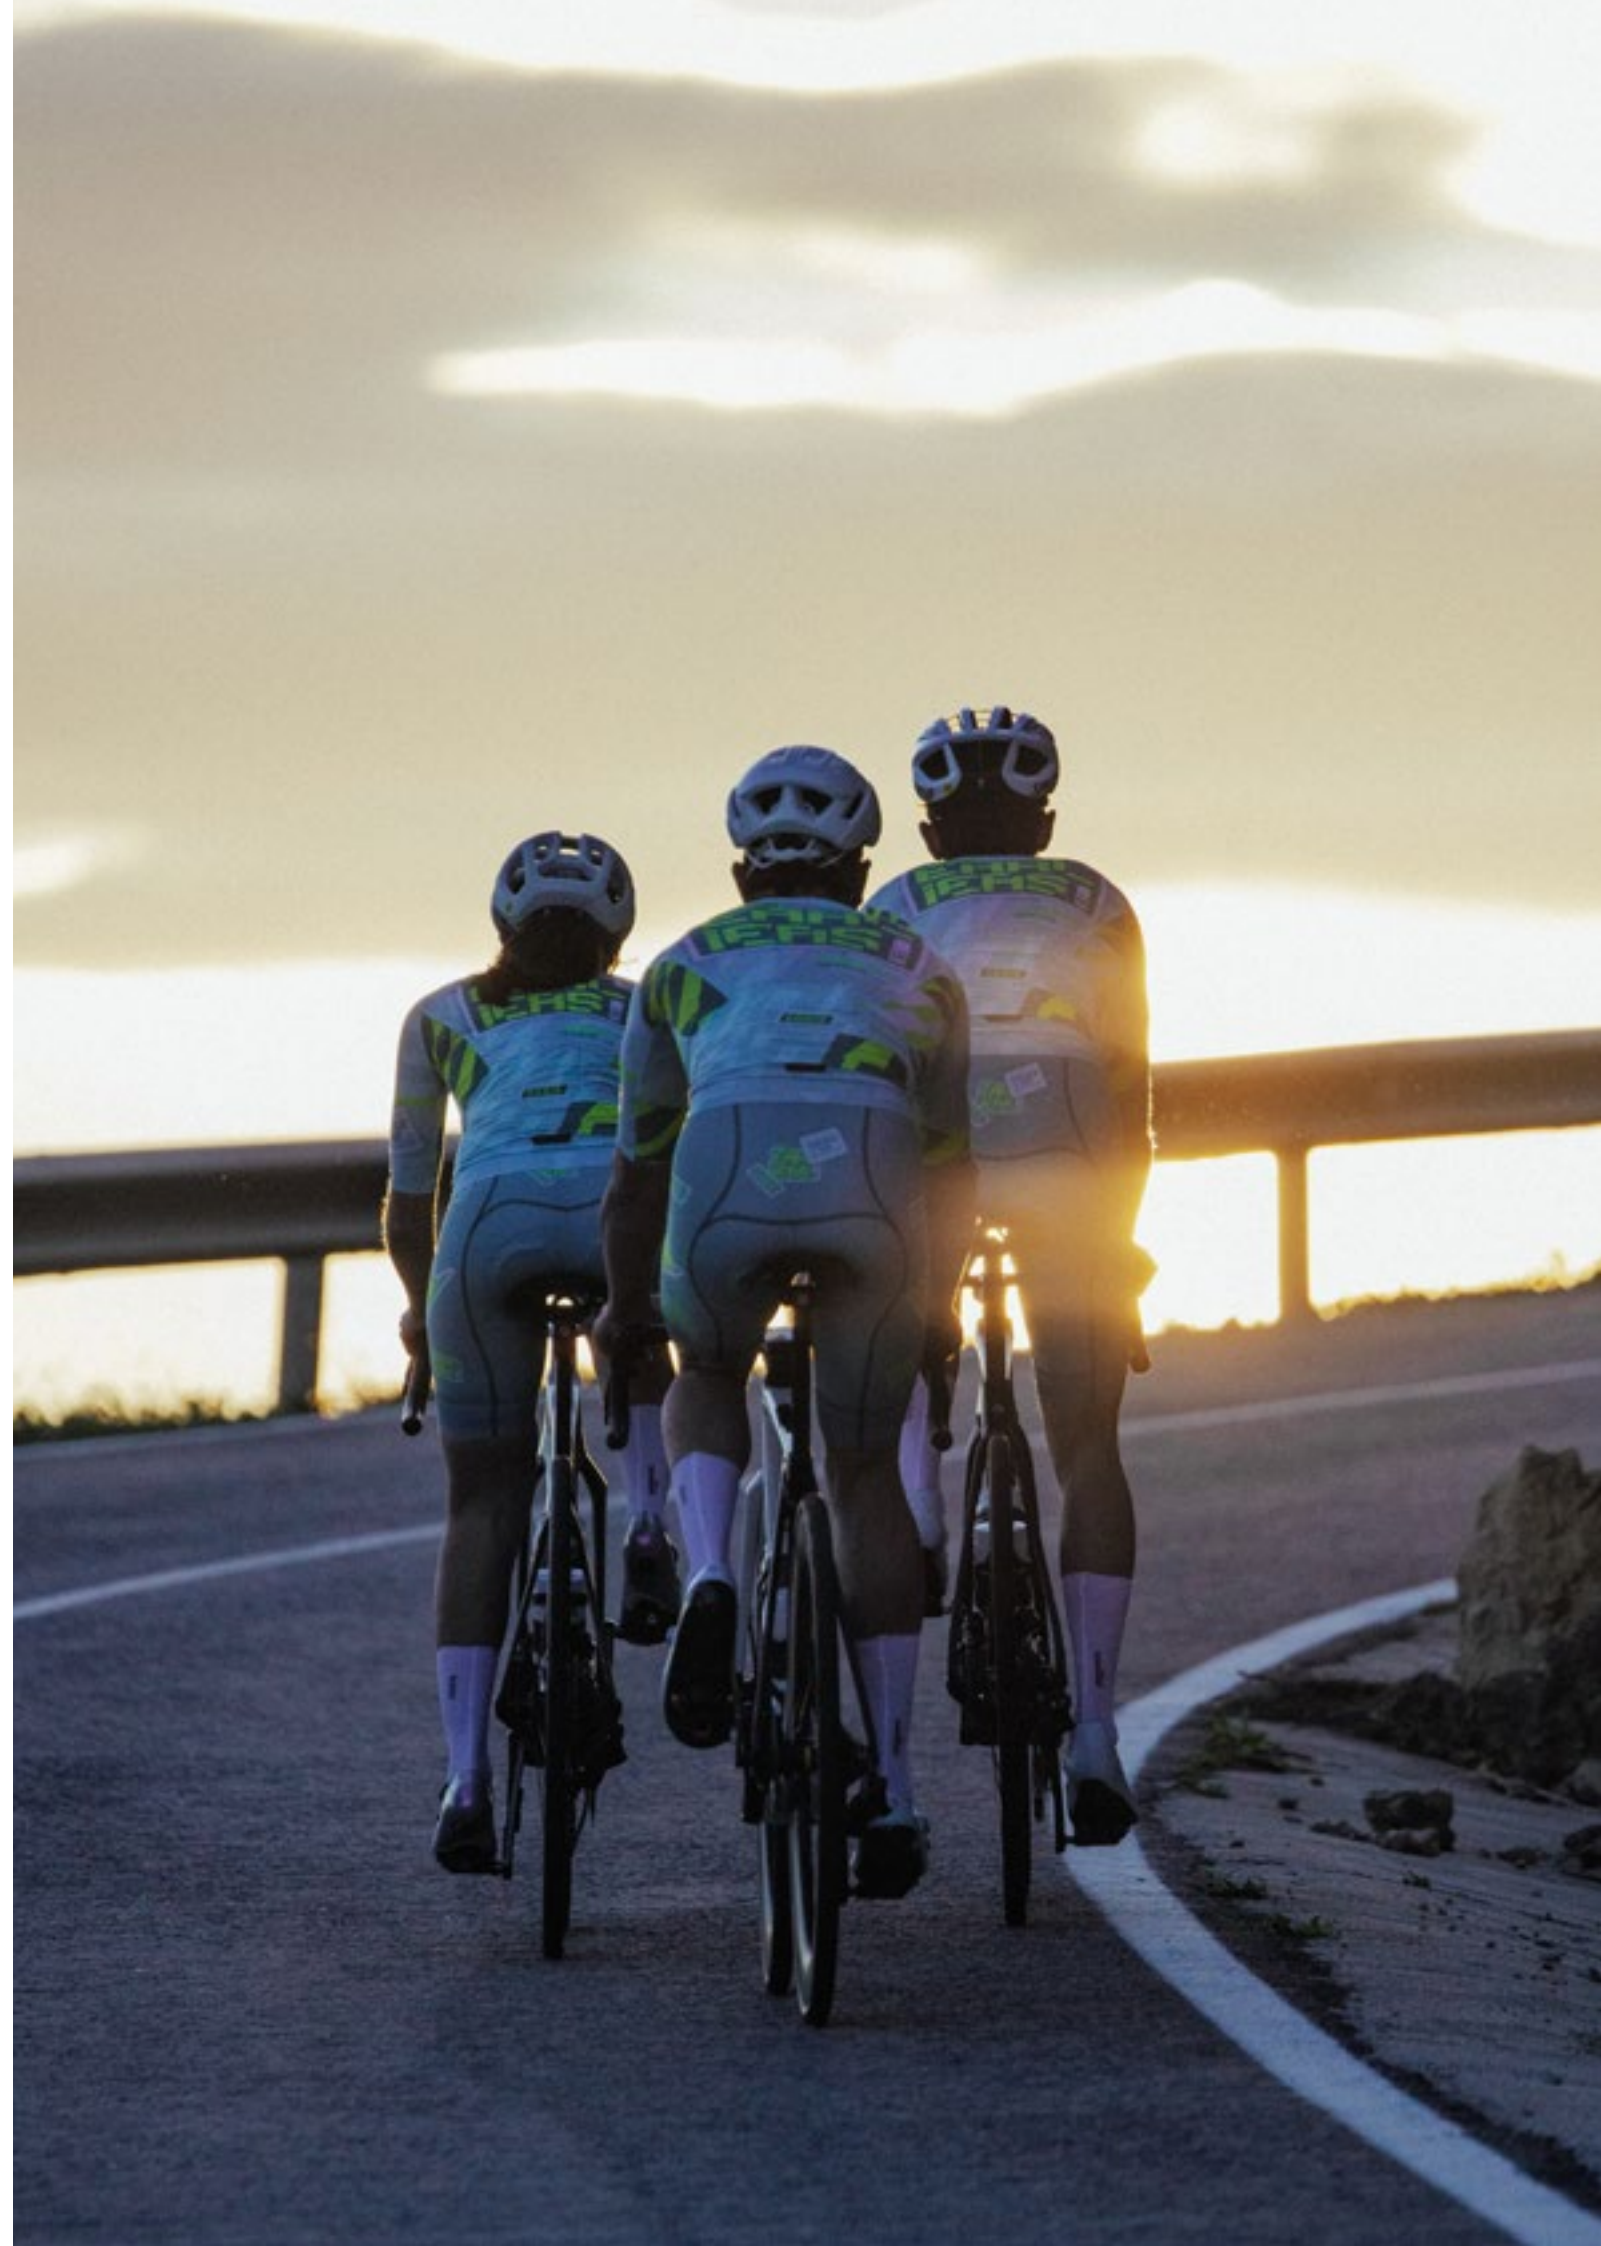

Born to go fast. Designed to go further.

A skinsuit created for riders who see cycling as a blend of speed, adventure, and freedom across every terrain. It combines aerodynamic performance with off-road functionality, delivering exceptional comfort for hours on end without compromising its clean, modern aesthetic.

The upper section features the new CX SCA construction, engineered to provide a precise, lightweight, and natural fit from the very first ride. Its aerodynamic sleeves enhance body contouring and reduce fabric movement as speed increases, creating a smooth, second-skin feel that lets you forget about the garment and focus entirely on the ride.

The lower section incorporates the latest generation of bib shorts, designed for adventures beyond the pavement. A completely redesigned main fabric with a circular knit structure offers greater stretch, durability, and long-lasting performance, adapting smoothly to the body even on the longest and most demanding rides.

Practical side pockets made from mesh and Lycra have also been redesigned to increase storage capacity, giving you quick and convenient access to your essentials throughout every adventure.

CHAMOIS PADS

CUSTOMWORKS

At Gobik Custom Works, we offer a carefully curated range of chamois pads designed to meet the needs of every rider and every type of ride. From long-distance endurance to high-intensity training, each option delivers the ideal balance of comfort, breathability, and protection. Developed with our exclusive technology, every chamois is engineered to maintain its performance even in the most demanding conditions. Choose from a selection of models tailored to your riding discipline and personal preferences. Combining customization, innovation, and performance, we create a truly personalized experience in the saddle.

Badana
k6

Designed specifically for the female anatomy.

Suitable for both road cycling and off-road disciplines, including mountain biking, gravel, and enduro.

Performance: 6 hours.
Thickness: 13 mm.
Density: dual 80-60 kg/m3.
Foam: Elastic memory foam.
Fabric: EIT ECO X-Tract.
Composition: 80% Polyamide - 20% Elastane

Badana
k7

Designed specifically for the male anatomy.

Suitable for both road cycling and off-road disciplines, including mountain biking, gravel, and enduro.

Performance: 7 hours.
Thickness: 13 mm.
Density: dual 80-60 kg/m3.
Foam: Elastic memory foam.
Fabric: EIT ECO X-Tract.
Composition: 80% Polyamide - 20% Elastane

Badana
k9
GRAPHENE

Designed specifically for the female anatomy.

Suitable for both road cycling and off-road disciplines, including mountain biking, gravel, and enduro.

Performance: 8 hours.
Thickness: 11 mm.
Density: triple 120-80-60 kg/m3.
Foam: Elastic memory foam.
Fabric: EIT ECO Graphene Flash antistatic, bacteriostatic, and ultra-breathable.
Composition: 76% Polyamide - 21% Elastane - 3% Graphene
